CSS Quiz 1

As a group work on the following questions - keep in mind the limited time you have! Good luck! For multi-choice just circle the correct answer, if you change your mind just put a slash through the circle.

Question 1 For each CSS *selector* put the number (#) of the *element(s)* it would match. The first one has been done for you. Note that **not all elements will be matched by a selector!**, and remember a selector can select multiple elements!

Selector	Element #s
`th {}`	1
`em {}`	
`p.red {}`	
`#footer {}`	
`p, a {}`	
`footer`	

#	Element
1	`<th>Name</th>`
2	`<footer>(C) Y7 Class</footer>`
3	`<em>go!</em>`
4	`<a class="red" href="site.html">here</a>`
5	`<p>hello world!</p>`
6	`<div id="#footer">(C) 2000 - 2020</div>`
7	`<p class="red">danger</p>`

Question 2 Given the following HTML

```
<p class="important">
    We have run out of hashbrowns!
</p>
<p>
    We has run out of avacado.
</p>
```

Write the CSS code below that will do the following:

1. Make the text within any paragraph with an "important" class red AND bold.
2. Make the text size of all paragraphs 15px;
3. Give all paragraphs a background color of #a2c.
